** According to Mr. David Delp, Lifeline’s IT Director, IQ-VIEW is the viewer of choice in most of Lifeline’s access centers: “Our partnering nephrologists and interventionalists are performing procedures which necessitate doing studies on the dialysis access sites for hemodialysis patients. We are utilizing both Philips and GE C-Arms as well as SonoSite ultrasound machines. We are running DICOM servers to store and manage images and we are using IQ-VIEW to view them. We currently have about 60 facilities around the country and have IQ-VIEW installed in all but a few of them, as the viewer that our partnering physicians utilize.”

** Elaine Halesey, Ed.D., R.T.R. [QM] [ARRT]: “Thanks so much for this terrific product. The addition of our ability to utilize this PACS system has positively enhanced the curriculum at Misericordia University in many ways. It allows our students to see, first hand, on campus, prior to them actually experiencing the clinical portion of the program, the type of product used in actual Radiology Departments. It also will improve our ability to deliver the curriculum in a more efficient manner.”
